

EASING WINTER PRESSURES

HOW TO SET UP A WHZAN VIRTUAL WARD IN JUST ONE WEEK

WINTER PRESSURES

We are only a few months away from Winter. We understand the pressures that will be put on the NHS. We're here to help you cope and to keep people out of hospital and reduce the burden.

Our Blue Box Virtual Wards solution can be up, running and fully functional within one week from your request so you can monitor people in the place they call home.

OUR VIRTUAL WARDS SOLUTION

Whzan have established virtual technology wards around the country for NHS partners in many conditions including Respiratory, COPD, Heart Failure, Flu & Covid, Frailty & OPAT.

Our Blue Box is keeping patients at home by allowing you to remotely monitor a minimum of vital signs, activity and NEWS2, and communicate with the patient using video calls or messaging.

Readings are typically taken by the patient 3-4 times a day as prompted by the Whzan tablet computer.

Virtual Ward hub users see a real-time view and prioritise community support accordingly.

As our data is interoperable with most Electronic Patient Record Systems, data can be transferred where it needs to go for review, or escalation if necessary.

Our NHS partners are quoting improved outcomes, reduced admissions of 65%+, tens of thousands of bed days saved and hundreds of thousands of pounds in savings.

We also now offer wearable technology to enable ongoing monitoring throughout the day and on the move.

3 STEPS TO BE UP AND RUNNING IN 1 WEEK

1

EASY TO RENT OR BUY

We have a conversation to determine your exact needs and number of Blue Boxes.

You can choose to rent the equipment as a managed service. No capex required.

IMMEDIATE DELIVERY & TRAINING

The equipment is immediately dispatched to you from existing stock.

We can deliver directly to your premises so your patients can take the Blue Box away with them when they leave your care.

We will train your team on how to use the equipment and can also train the patient directly if preferred. We have experienced NHS support staff within Whzan to help you at any stage.

2

3

DISCHARGE AND REASSIGNMENT

Once the patient is discharged from your virtual ward, typically after 1-2 weeks, we come and collect, clean and sanitise the equipment.

We then deliver back to your hub or to the next patient on your virtual ward and train them to use the equipment.

This cycle gets repeated whilst you have ongoing needs.

REMOTE MONITORING AND/OR FACE-TO-FACE PATIENT MANAGEMENT

Where additional clinical capacity is required to support patient management, our partners at Acacium Group can provide a flexible suite of options. This ranges from GP or specialist clinical leadership with coverage for a wide range of clinical pathways, to specialist nurse or ACP-led wards with provision for both remote monitoring and home visits.

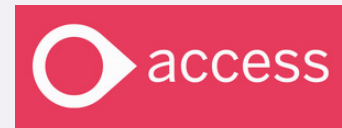

We offer seamless integration between expedited discharge and admission avoidance routes and up to 24-hour patient monitoring available where appropriate.

INTEROPERABILITY

We understand the importance of data in providing the highest levels of care. This is why we've made integrating Whzan technology with a range of patient record systems a top priority to enable the immediate, secure transfer of patient data - supporting potentially life-saving decisions.

Alongside integrations with EMIS, SystmOne, Adastral 111, PARIS and NHS Digital National Record Locator (NRL), we also link up to many local record systems, plus our new Rio partnership is operational now.

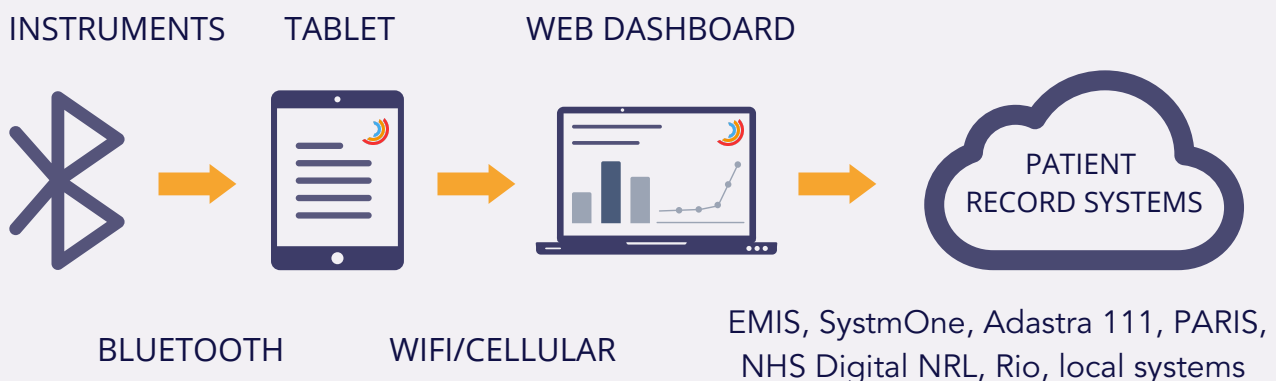

WHAT'S IN THE BLUE BOX?

All Instruments and POC Testers are Bluetooth

- GSM enabled tablet PC with a wide range of assessment tools
 - Thermometer
 - Pulse Oximeter
 - Blood Pressure Monitor
- Optional:**
- 1-12 lead ECG
 - Scales
 - Point of care blood testers for Lipid profile, glucose, HbA1c, lactate etc
